## **Fidelity Comtech Releases Three New Beam Pattern Sets**

**Longmont, Colorado (December 8, 2010)** – Fidelity Comtech, Inc. (FCI) – the leading provider of extended wireless solutions for the maritime port, rail, and auto processing industries, today announced it has released three new beam pattern sets for the award winning Phocus Array RF system.

The pattern sets are 90 degree, 180 degree, and figure eight. In addition, the beam pattern sets can be uploaded to your Phocus Array system through the download page on our web site (<http://www.fidelity-comtech.com/support/download-page/>).

“The addition of the new beam pattern sets will allow our customers to further tune the Phocus Array system in their operational areas to optimize RF coverage where it is needed most” said Joe Carey, President and CEO of Fidelity Comtech.

Fidelity Comtech, Inc. is headquartered in Longmont Colorado. Since 2001, Fidelity Comtech has provided premier RF components, antennas and interfaces to commercial and government customers.

Its Phocus Array products, utilizing Vector Modulated Technology™ (FlexVMT™), is changing and improving the way the world uses wireless communications. Fidelity Comtech is the leader in outdoor extended wireless and Geo-Location products. Its products deliver the flexibility of traditional Wi-Fi IEEE 802.11 wireless products with the capability on a packet-by packet basis to dynamically “beam steer, shape, and size” extended signals for miles while deriving directional and distance information about the client.

Phocus Array, FlexVMT, G.R.I.P.S., Geo-I, and Vector Modulated Technology are trademarks of Fidelity Comtech Inc. All other trademarks are the property of their respective owners. VMT is an acronym for the technology covered by U.S. patent #6,894,657. For more information, visit <http://www.fidelity-comtech.com/> or call 1-303-678-8876.
